

Beamer

Beam files between Neos, AlphaSmart® 3000s, Danas, or other Palm OS devices to promote sharing of ideas and collaborative learning

- Direct file exchange between any two devices (Neo, AlphaSmart 3000 IR, Dana, or Palm OS®) facilitates group writing activities and peer editing.
- Beaming files between teachers and students simplifies assignment distribution, collection, and grading.
- Support for industry-standard IrDA® (infrared) technology ensures that files are sent and received error-free without garbling or data loss.
- Cable-free file transfer between devices minimizes the need for connectors, cradles, and IR pods.
- Compatibility with multiple devices enables users to beam files anytime, anywhere without the need for a Windows or Macintosh computer.
- Ability to receive a memo, address entry, to do item, or date book appointment allows sharing of information with Palm OS device users.
- Turn off sending to prevent unauthorized beaming, so teachers can keep students on task and reduce potential distractions.

Beamer SmartApplet allows Neo and AlphaSmart 3000 IR users to use infrared beaming to exchange text files with each other and with users of other infrared-enabled devices, including Dana and Palm OS devices. Beamer users can receive text from Palm OS Date Book, Address Book, and Memo Pad applications. They can also exchange AlphaWord™ documents with Dana users, allowing teachers to extend group-writing activities and collaborative learning to all AlphaSmart device users. Beamer SmartApplet requires no cables, cradles, pods, or other hardware components, and uses industry-standard IrDA technology, so you'll never have to worry about data loss or file corruption.

```
Select where you want to store the file:
- File 1 (5290 characters)
- File 2 (11000 characters)
↓ File 3 (empty)
```

Beamed files can be received and saved in any file the user chooses.

```
Settings
- Permit Send: YES
- Warn if overwriting clipboard: YES
↓ Send to Palm device as ALPHAWORD file
```

Beamer Settings let users turn off sending, send to Palm OS devices using AlphaWord or Memo (text) file format, and more.

System Requirements

Installation and management require Macintosh OS 9.0 or later, or Windows 98SE or later. Beamer SmartApplet runs on both Neo by AlphaSmart and AlphaSmart 3000 IR.
